24 classrooms, five special use rooms, cafeteria, offices, library annex, and multipurpose exercise room

Slab-on-Grade
Permanent
Modular
Construction

Ramtech used the company's PMC slab-on-grade system for this 37,329 square foot elementary school building for Arlington Classics Academy located at the charter schools Dalworthington Gardens campus. The design-build project provides space for 24 standard classrooms to accommodate up to 528 additional students in the third through fifth grades. The modular school building has five special use classrooms for the school's art, music, speech, and special education programs. It also includes a cafeteria with a warming kitchen, administrative offices, a library annex with a tutoring center and learning lab, and a 3,000 square foot multipurpose exercise room with a 12 foot ceiling height and its own dedicated heating and cooling system. Ramtech provided full site development including the addition of two acres of paving to help ease the amount of vehicular traffic on the main feeder road.
