3,135 sq ft

Facility Use

Office space
Crew quarters

Description

Private offices
Men's & women's locker
& shower rooms
Break room
Central assembly

Completion

90 days

Traditional
Modular
Construction

The City of San Antonio's Department of Public Works Maintenance and Operations Division provides for engineering, maintenance and governance of the regulations for the City's streets, storm water, and transportation. With over 650 employees the Division needed to increase their available space of offices and crew quarters. By choosing Ramtech and a traditional modular construction approach to the project, the City was able to meet their current need by placing the facility on an unused part of the parking lot while also planning for the eventual relocation of the building to another site. This 3,135 square foot facility features eight offices, men's and women's locker and shower areas, break room, and a large central assembly area.
