Operations facility

## Description

Eight private offices

Restrooms

Showers

Locker room

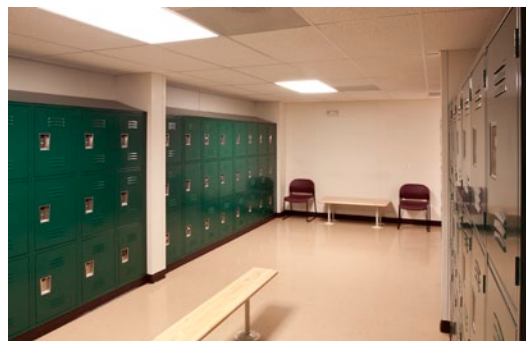

Break room

Central assembly

## Completion

90 days

Traditional  
Modular  
Construction

The City of San Antonio's Solid Waste Management Department provides services for several environmental programs in addition to collecting solid waste. Operating four centers within the City, the Department needed to consolidate some of their 482 employees to their Southeast maintenance and operations facility. Ramtech provided a 3,135 square foot relocatable modular building with eight private offices, men's and women's restrooms and showers, locker room area, break room, and a large central assembly area. Using traditional modular construction, the exterior of the building incorporates 26-gauge R-panel siding with wood steps, ramps, and landings. The interior features VCG wall covering with a combination of VCT flooring and commercial grade carpet.
