

Arlington Water District

Arlington, TX

Project Size

4,200 sq ft

Facility Use

District office space

Description

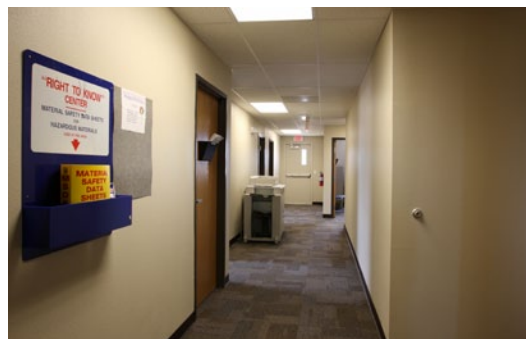

Simulated stucco exterior finish

Four zoned HVAC units

Completion

110 days

Relocatable
Modular
Construction

The city of Arlington, TX was faced with reorganizing their water department to meet the city's growing demand for services. They needed a quick solution in order to relocate some of their administrative and engineering personnel from a different location to the Water District's sprawling main compound. The solution was a six unit modular complex designed for an adjacent equipment yard area. The facility provides for private offices, engineering space, two conference rooms, and a business office with dispatch area. The 4,200 square foot building features a simulated stucco elastomeric paint finish, four five-ton wall-mounted HVAC units, and ADA compliant metal step and ramp assemblies.
