Design-build with stipulated sum

Facility Use

Medical clinic

Description

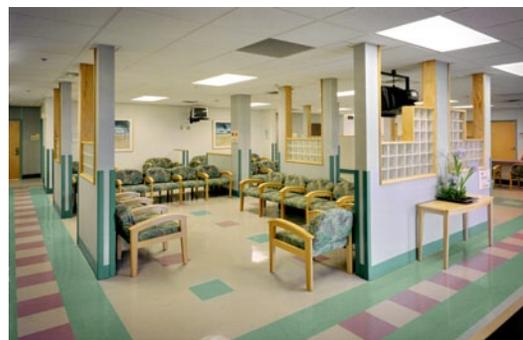

Steel and concrete construction

Brick wainscot and Carrara exteriors finishes

Completion

270 Days

Slab-on-Grade
Permanent
Modular
Construction

Ramtech provided full design-build services for the development and construction of this 8,500 square foot addition to the existing community-based outpatient clinic. Because the original contractor was removed from the project for non-performance, Ramtech employed its Accelerated Building System to meet an expedited construction timeline.

Located within two miles of the coast, the facility provided challenges to meet the foundation requirements due to a very shallow water table. The building features an EIFS exterior, multiple exam rooms, a TB isolation room, and an imaging center with a large x-ray area. A computer-controlled environmental management system was installed along with security and communications systems tied into the existing structure.
