Contract Type

Purchasing Co-op

Facility Use

Police department
headquarters

Description

Administrative offices
and interrogation rooms

Completion

45 days

Pier & Beam
Permanent
Modular
Construction

The Cottonwood Shores police department was located in a 720 square foot facility that badly needed repairs. The city selected Ramtech to design a new facility to provide the five-officer department with administrative office space, an open office for patrol officers, intake and interrogation rooms, evidence storage room, and a break room area. The building was developed using pier and beam permanent modular construction with the modular sections installed on a stem wall foundation. A combination of 26 gauge R-panel siding and stone veneer were used on the exterior parapet wall which included a concealed roof line with additional height at the main entry. The interior is finished with vinyl covered gypsum on the walls and vinyl composition tile flooring throughout the facility.
