

Vance Air Force Base

Enid, OK

Project Size

6,550 sq ft

Construction

Type Vb

Contract Type

Design-build

Facility Use

Temporary fire crew quarters

Completion

200 days

Relocatable
Modular
Building

Ramtech developed this 6,550 sq. ft. modular building to use as living quarters while the base's existing facility was remodeled. The temporary nature of the project mandated a limited permanent impact to the site, requiring the building to be easily disassembled and relocated. The building provides for 19 bedrooms and a private office, men's and women's restroom/locker-rooms, laundry room, janitor's closets, a full kitchen, dining/day room, and fitness room. Using a double-loaded corridor layout, a combination of 12' x 64' and 12' x 56' modules were installed end-to-end, then perpendicularly connected to an off-set wing of 12' x 62' modules installed side-by-side. This allowed for the construction of the building utilizing only nine modules with no required site construction.
