Medical and dental clinic

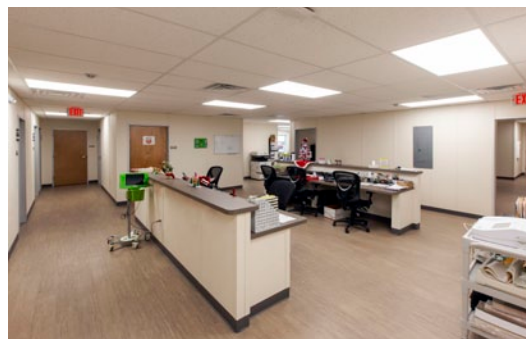

Description

13 exam rooms, private offices, x-ray, lab and pharmacy, dental exam rooms

Completion

90 days

Pier & Beam
Permanent
Modular
Construction

Community Health Centers of South Central Texas were in desperate need to relocate from a two-room clinic located inside the local school district's intermediate school. Ramtech designed, manufactured, and installed a free-standing 6,498 square foot medical and dental clinic on the school districts property that provided 13 exam rooms, dental exam rooms, a reception area, multiple private offices, an x-ray room, lab and pharmacy areas, vaccination room, centralized nurses station, and an eligibility screening area. The Type VB modular building utilized HardiePanel vertical siding with a metal fascia band, aluminum entry assemblies, and a roof-mounted HVAC system. The interior is finished with VCG on the walls, LVT flooring, and custom painted cabinets throughout the facility.
