

## Project Size

18,432 sq ft

## Construction

UBC Type Vb

## Contract Type

Negotiated

## Facility Use

Temporary elementary school

## Description

10 portable classrooms and quad classroom

## Completion

60 days

Relocatable  
Modular  
Construction

When Fort Worth Country Day School required a temporary elementary school during the demolition and construction of a new permanent facility, they turned to a combination of our standard double-classroom and quad classroom buildings to meet the need. Known as the Lower School Village, the complex provides for 10 double classrooms with restrooms and one multipurpose open floorplan quad classroom. The project was split into two areas with eight of the classrooms grouped together and connected using a site constructed concrete walkway with wood decks, ramps, and landings, while the other two classrooms were grouped together with the quad building. All of the buildings utilize R-Panel metal siding along with a metal roof. The interiors feature VCG walls and carpet tile flooring.
